RESTRICTION/ELECTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a method for cleaning wastewater, classified in class 203, subclass 40.
- II. Claims 12-17, drawn to an apparatus for removing contaminants from an aqueous wastewater stream, classified in class 202, subclass 185.3.
- III. Claims 18-24, drawn to an apparatus for controlling and/or monitoring the continuous evaporation of water from a wastewater brine, classified in class 159, subclass 4.4.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II & III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus such as a non-flashing falling -film -evaporation system or the evaporation system as described e.g., at page 1, lines 11-19 of the specification.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions II & III have different modes of operation, different functions and/or different effects. The apparatus of group II removes contaminants from an aqueous wastewater stream, whereas, the invention of group III controls and monitors the continuous evaporation of water requiring a sensing means and controlling means, not required in the group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification; and the search required for Group I is not required for Group II and III, and vice versa; and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Virginia Manoharan whose telephone number is 703-308-3844. The examiner can normally be reached on Tuesday-Friday; 7:30AM-6:00PM.
